

Mack® PowerLeash™

An engine brake powerful enough to stop a Mack.

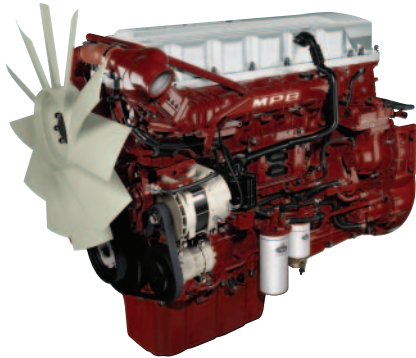

More power. More control.

The Mack® PowerLeash™ engine brake provides more braking horsepower through mid-RPM ranges, and weighs less than other engine brakes. It is fully integrated with the MP™ Engine Series, which includes the MP7, the MP8 and the all-new, 605-horsepower MP10. And with better braking over the entire speed range, PowerLeash delivers the most horsepower ever in a Mack engine brake. It's everything you want in an engine brake, and it's every bit as durable, powerful and reliable as a Mack truck itself.

Nothing's quicker.

Drivers will immediately notice the near-instantaneous engine braking, as its responsiveness gives drivers confidence behind the wheel. For trucks with automated transmissions, the quick response also enhances downshifting performance.

Less is more.

Weighing 50 pounds less than other engine brakes, PowerLeash delivers superior braking power while using fewer parts. And its lightweight, streamlined design gives weight-sensitive transporters the benefit of increased payloads.

Designed for smooth, quiet performance.

Reliability is built-in with PowerLeash. Made with a one-piece, integral rocker cartridge, all internal components are precision machined to exacting tolerances. The design also makes operation quieter than ever before.

We stand behind it.

PowerLeash is backed by an industry-leading, 3-year, 300,000-mile warranty.
